Bone Augmentation

**RCP - Resorbable Collagen Plug**

- Fully absorbable collagen plug, ideal for applications in minor oral wounds.
- Controls bleeding due to the intrinsic haemostatic properties of collagen fibre.

10 x 20mm x 10

1091906  €85.61

**RCF - Resorbable Collagen Foam**

- Resorbable collagen foam, providing an excellent matrix to assist in wound healing.
- Fully absorbable.
- Establishes a matrix for tissue ingrowth.
- Protects the oral wound bed.

20 x 40mm, 3mm Thick x 10

1091902  €91.72

**RCT - Resorbable Collagen Tape**

- Resorbable collagen tape, ideal for applications in minor oral wounds.
- Aids in repair of the Schneiderian Membrane.
- Controls bleeding due to the haemostatic properties of collagen fibre.
- Protects the oral wound bed.

25 x 75mm, 1mm Thick x 10

1091896  €126.24

**Socket Preservation**

- Bone grafting kit, perfect for single tooth extractions.
- Designed to make socket preservation convenient and successful each and every time.

**Socket Preservation Kit**

NuOss Cancellous Granules x 0.5g, RCP Resorbable Collagen Plug, conFORM Resorbable Collagen Membrane 15 x 20mm, 3-0 Violet Braided PGA Suture (DS18 Needle)

1113234  €172.11

To order or for advice please visit www.henryschein.ie or call us on Dublin 01 4565288 or Cork 021 4297818
H & S Advanced Implantology Pack

**OMNIA**

- Advanced drape set designed for Implantology procedures.

SpecialPlus Model Gowns - L x 1, XL x 1, Non-Woven Gown with Elastic Bands x 1, Transpiring Round Caps x 2, Perforated Surgeon Caps with Fixed Laces x 2, 3 Ply Procedure Masks with Ties x 2, Absorbent Liquid Proof Drapes - 75 x 90cm x 2, 100 x 150cm x 1, 150 x 200cm x 1, Folded Gauzes 8 Ply 5 x 5cm x 4, Tubing Sleeves with Fixing Adhesives 120 x 7cm x 2, Adhesive Films 20 x 20cm x 3, Aspiration System with Tip, Blue Adaptor, Quick Drill Sleeves x 2, X-ray Gauze Swab 10 x 10cm x 4, Saliva Ejector, Suction Tube Connector and Suction Tube 3m

Wound Dressing - Oral Health

HybenX®
EPIEN MEDICAL INC

- HybenX - Anti-biofilm tissue treatment - patented formula to remove the stubborn plaque biofilm and kill the bacteria associated with it.
- Works by desiccation - absorbing the moisture from the plaque biofilm.
- HybenX also has anti-microbial, haemostatic and anti-inflammatory properties.
- Works on soft and hard tissue - can be used to treat gingivitis, ulcers, mild and severe periodontitis.
- Softens calculus - saving clinical time on scaling.
- Use before and after routine scaling and root planing for removing plaque biofilm from tooth and gum surfaces in hard to reach places.
- Use in conjunction with conventional treatments to help gain control in cases of peri-mucositis and peri-implantitis.

Syringe 1ml x 2 and Tips x 2

1130756 €275.00

PeriAcryl®90 Oral Tissue Adhesive
GLUSTITCH INC

- PeriAcryl is a high viscosity cyanoacrylate oral adhesive for use in oral surgery.
- Biocompatible and non-toxic with fast setting time for procedures in periodontology and implantology.
- Ideal for securing dental dressings such as COE-PAK™.
- Acts as a liquid bandage over donor sites after harvesting tissue.
- Useful for gingival grafts, sub-epithelial connective tissue grafts, open flap curettages, crown lengthening procedures and frenectomies.
- Secures tissue grafts without the use of sutures.
- Violet in colour for ease of visibility.
- 2 year shelf life.

5ml Bottle, Pipettes x 50 and Tray
1127407 €80.00
Osstell ISQ Instrument Kit

- Osstell ISQ is a compact and easy to use, complete diagnostic system for determining implant stability and osseointegration.
- ISQ (Implant Stability Quotient) is a measurement scale for use with the RFA (Resonance Frequency Analysis) method of determining implant stability.
- The hand-held probe magnetically stimulates a SmartPeg mounted to the implant without touching it, this generates an ISQ value - the higher the ISQ value the more stable the implant.
- Measurement results are clearly displayed on the screen.
- SmartPegs for various implant systems and connections are available.

Kit
Osstell Instrument x 1, Testings device x 1, Measurement Probe x 1, USB Cable and Main Plug.

1149385 €3300.00

*For SmartPegs please visit henryschein.ie for more information and relevant implant fittings*

Manage implants at risk
You’ll find the Osstell ISQ especially valuable when treating higher risk patients and implants at risk of failure due to poor integration. Osstell gives you an early warning, as a decreased ISQ value, if osseointegration isn’t progressing as expected. It can help you and your patients avoid the cost of implant failure or redoing a crown due to premature loading.

Reduce treatment time
If the initial mechanical stability is high enough a one-stage approach is often used together with immediate - or early loading. Measuring again before the final restoration, and comparing that value to the baseline value taken at placement, makes the decision whether to proceed quick and easy.

Available with 0% finance
Over 12 months* To discuss your investment and finance requirements, please contact your local equipment sales specialist.
Richard Kenny 086 6069628 Jim Way 086 8353812

All finance options shown are subject to status, availability and full credit approval. An arrangement fee may be charged on the first payment. 0% finance is for a 12 month repayment period only. Full details are available from Grenke Finance. To qualify for 0% finance goods must be invoiced in one single transaction and products are non-returnable unless faulty. Institutional accounts are not eligible for 0% finance. Henry Schein Ireland reserves the right to correct omissions and errors in this flyer. E&OE.
Zest LOCATOR® Components

- LOCATOR® components consist of replacement male with two retention surfaces.
- The outer ring and centre nipple allow for maximum hold. Good for use with divergent implants up to 10 degrees - can accommodate up to 20 degrees between 2 or more implants.
- Extended range is a single retention surface which has the inner nipple removed. For divergent implants up to 20 degrees (accommodates up to 40 degrees between two or more implants).

LOCATOR® INSTALLATION; CHAIRSIDE SAME FOR ALL LOCATOR® IMPLANTS

NOTE: It is recommended that you wait 12 weeks before restoring the 3.25mm LOCATOR® Implants.

Place the white Block Out Spacer(s) over the head of the LOCATOR to prevent acrylic from attaching to the implant head.

Note: Confirm that none of the LOCATOR head is exposed for the acrylic to attach to.

Snap on the Denture Cap, with the black processing male, over the LOCATOR and apply any standard location indicator paste on top of the cap.

Align and place the denture in the mouth picking up the indicator paste on the denture.

Rinse, clean & dry denture and Denture Cap before proceeding.

After the acrylic has set, remove the denture with the LOCATOR caps, now attached, from the mouth and trim off any excessive acrylic from the denture and the Denture Caps.

Note: Use the LOCATOR Male Installation/Removal Tool to remove and insert the plastic male parts from the LOCATOR Denture Caps (clear – most retentive, blue – least retentive). Plastic male parts are also available without a nipple to accommodate the increased divergent implant.
truFIX

ACE

- The truFIX system provides you with everything you need for both bone fixation and membrane stabilisation.
- This system incorporates all the necessary components to pick up and drive the ACE truSCREW and truTACK.
- The truFIX system eliminates the need for multiple systems and unnecessary components, making it user-friendly for your practice.

Ridge Expanding Chisel Kit

ACE

- Chisel kit used for ridge expansion procedures.

Sinus Lift Kit

ACE

- Sinus lift kit containing all necessary instruments for the procedure.

Complete Fixation Kit

truFIX Driver Handle, truTACK Driver Tip, truSCREW - Contra Angle Driver Tip, Driver Tip and Driver Removal Sleeve, Contra Angle Pilot Bur 0.45mm (27mm length), Contra Angle Step Drill 8mm (1.6mm Steps), truScrew Packaging Removal Tool 0.88mm

1091918 €721.54

Ridge Chisels 3.0mm, 4.0mm, 5.0mm, 9.5mm, Autoclavable Tray, Chisel Handle (uses 1.25mm Hex Driver)

1106943 €232.16

Sinus Lift Osteotome

ACE

- Sinus lift, osteotome kit, containing concave tips.

Osteotome Kit

Stepped - 1.6mm/2.0mm, 2.0mm/2.8mm, 2.8mm/3.3mm, 3.3mm/4.0mm, 4.0mm/4.35mm, 4.35mm/5.0mm, Final - 2.8mm, 3.3mm, 4.0mm, 4.35mm, 5.0mm, Autoclavable Tray

1106938 €545.59

Sinus Lift Kit

Shepherd Sinus Lift Retractor, Freer Periosteal Elevator-Strong Curve, Clepper Tatum Antralplasty Elevator, Sinus Lift Curettes - Standard Bend 3mm/5mm, Severe Bend 3mm/5mm, Titanium Depth Packing Gauge, Autoclavable Tray

1106937 €280.12
**Osteotome Bone Spreader Kit**

ACE

- Bone spreader osteotomes especially designed for taking chin and ramus monocortical block grafts.
- Markings at 13, 16 and 19mm.
- D-Contoured tips to avoid fracturing weaker bony wall.
- Single ended handle can be tapped with a mallet.
- Both tray and instruments are made of stainless steel.

**Offset Osteotome Kit**

ACE

- Osteotome kit for use whilst undertaking bone grafting procedures.
- Concave kit.

**Site Dilator**

ACE

- Bone grafting, site dilator kit.
- Convex tips.

**Ace Periotome Kit**

ACE

- Used to sever the periodontal ligament attachment from the root of the tooth and the alveolar housing.

---

Kit

Osteotome Bone Expanders - 4.3mm 27mm Scoop, 5.45mm 26mm Scoop, 7.5mm 26mm Scoop, 10.0mm 27mm Scoop, Mallet and Tray

1115064 €298.13

Kit

Stepped - 1.6mm/2.0mm, 2.0mm/2.8mm, 2.8mm/3.3mm, 3.3mm/4.0mm, Final - 2.8mm, 3.3mm and 4.0mm

1112112 €525.61

Kit

Dilators Stepped - 1.6mm/2.0mm, 2.0mm/2.8mm, 2.8mm/3.3mm, 3.3mm/4.0mm, 4.0mm/4.35mm, 4.35mm/5.00mm, Final 2.8mm, 3.3mm, 4.0mm, 4.35mm, 5.0mm, and Tray

1112577 €525.08

Kit

Periotome Handle, Blades x 5, Mallet and Tray

1115055 €279.99
Ridge Expanding Screw Kit

**ACE**

- Safe, controllable way to widen a thin questionable ridge to one capable of accommodating an implant of up to 4.5mm without compromising cortical bone.
- The slow and steady pressure created as the screws advance expand the alveolar bone without raising the flap.
- Laser markings at 8,10,11.5,13 and 15mm provide accurate guidance for the placement of implants into the newly expanded ridge.

**Screw Kit**

Bone Expanders - 2.5mm, 3.1mm, 3.6mm, 4.3mm, Connection Driver Tool (Hex), Universal Ratchet, Driver Extender (Hex), Square Titanium Bowl, Autoclavable Tray

1106945  €460.64

Luxator® LX

**Mechanical Periotome**

**DIRECTA**

- Mechanical Periotome offering improved safety, precision and access for atraumatic extractions.
- Reciprocating tip in a vertical direction - secure cutting of the Sharpey’s fibres in a patient-friendly way.
- Self-directing tip allows the periotome tip to follow the root surface reducing the risk of bone damage.
- Optimal access for hard-to-reach areas (molar, lingual/palatinal, distal).
- Durable titanium-coated tip glides more easily into the socket and remains sharp.

**Starter Kit**

Handpiece x 1, Periotome Tip Short x 1, Periotome Tip Long x 1, Tip Holder and Plunger

1136604  €678.15

911 Fixture Removal Kit

**MEGAGEN**

- Simple solution for the removal of implants.

**Intro Offer**

Fixture Removers x 4 (3.5-4.00 Short, 3.5-4.00 Long, 4.5-5.5 Short, 4.5-5.5 Long), Drivers -15mm Long x 1, 20mm Long x 1, Fixture Remover Screws - Thread 1.6mm x 1 1.8mm x 1 and 2.0mm x 1

1151779  €899.00
This technique takes advantage of the innate elasticity and flexibility of bone. SLOW, STEADY pressure created as the screws advance expands the alveolar bone without raising the flap.

**TUTORIAL RIDGE EXPANDING PROCEDURE**

- **Prepare the osteotomy with an ACE .8mm/1.6mm Step Pilot Bur** to desired implant depth. Drilling speed should be 600 - 1,000 rpm.

- **Use either a contra-angle or hand drive tool to drive the expanders** (in sequential order) to the desired osteotomy width. Use a 3.6mm expander for 3.75mm/4.0mm implants. Use a 4.3mm expander for 4.75mm implants.

- **Using the 2.5mm expander tap into the prepared pilot hole** to the desired implant length. Drilling speed should be 25 rpm.

- **Using the 3.1mm expander next, increase the size of the osteotomy.** Drilling speed should be 25 rpm.

- **Use the 3.6mm as the final expander** for a 3.75mm / 4.0mm implant. If placing a 4.75mm implant continue with a 4.3mm expander. Drilling speed should be 25 rpm.

- **Insert the appropriate sized implant into the osteotomy, which now has a compressed boney interface.**

**To order or for advice please visit www.henryschein.ie or call us on Dublin 01 4565288 or Cork 021 4297818**
Easyretrieve Two Piece Trephine System
ACE

- Easyretrieve Trephine System is a simple system for siting trephine burs and harvesting bone.
- A pilot hole is made, the trephine with drill guide centres into the pilot hole to make the initial shallow trephine cut.
- The guide is removed allowing you to drill to the desired depth.
- The harvested bone can be easily retrieved by removing the driver shaft from the trephine.
- A unique tool slowly and controllably retrieves the core from the trephine.

Two Piece Trephine Kit
CA Driver Shaft, CA Pilot Drill Bur 2.0mm, Installation & Removal Tool 1.25mm Hex, CA Ratchet Extension/Hand Driver Tool, Two Piece Trephine Knurled Holder, Two Piece Bone Removal Tool, Bone Core Separator Tool 4.5", Square Titanium Bowl, Drill Guide 22mm

**TUTORIAL** Internal sinus lift procedure utilising Easyretrieve two-piece trephine

**FROM A HEALED SITE**

Instead of starting the osteomy with graduated drills, start with a 3.50mm I.D. trephine. Start in reverse to minimise chatter, going forward in 2mm increments.

As the trephine comes close to the sinus membrane, use slow speed – no water. Remove the trephine.

Extract the tooth which, in many cases, is a maxillary molar. Use the least traumatic technique, such as dividing the tooth into three sections, and remove each root separately so as not to damage the interproximal or labial plate of bone. Periotomes may be used.

**FROM FRESH EXTRACTION SITE**

Instead of starting the osteomy with graduated drills, start with a 3.50mm I.D. trephine. Start in reverse to minimise chatter, going forward in 2mm increments.

As the trephine comes close to the sinus membrane, use slow speed – no water. Remove the trephine.

**REMOVE BONE FROM TREPHINE, LIFT SINUS MEMBRANE, PLACE IMPLANT**

Push out harvested bone by removing the contra angle shaft from trephine. Assemble the bone removal tool on the trephine and slowly turn plunger knob to push bone out. Use a sterile bowl to gather the harvested bone for re-use.

Then take a 4.75mm tap and try to elevate the bone and sinus membrane. If there is resistance, go back and use the trephine again. Repeat until you see the tap going apically. Again slow speed – no water.

Increase the elevation with the trephine to the desired depth.

Insert the bone core and again use tap, but only in 1-2mm increments.

Then take desired implant and slowly insert into elevated osteotomy site. After the implant has been placed, the areas where the socket existed should be grafted with the bone graft material of your choice if necessary. The area should be covered with tissue in an attempt to achieve primary closure.
